RESEARCH TO MARKET
SOLUTION

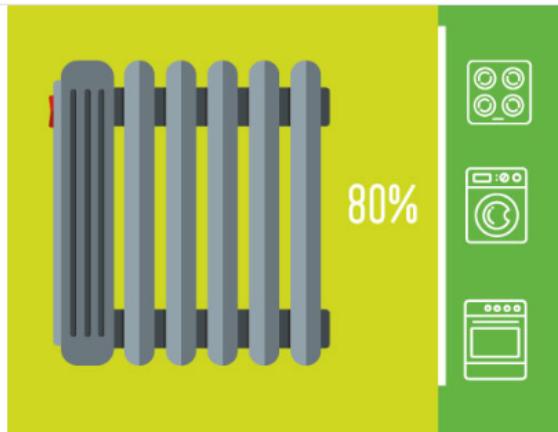

eurac
research

HARP's main goal is to motivate individuals to plan the replacement of their often outdated and fossil-fuel operated heating appliances, with more efficient alternatives.

Why is it important?

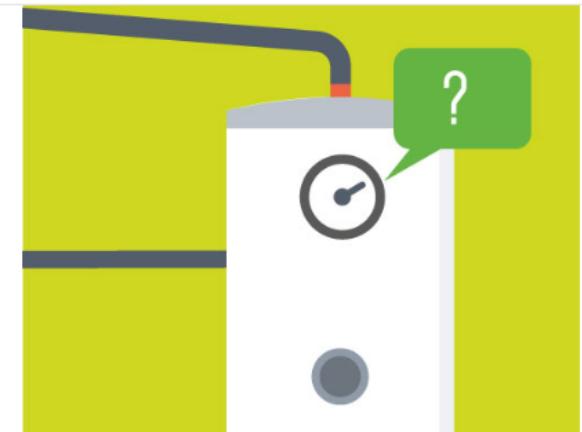

Heating and hot water represents 80% of the energy demand of EU households.

and 84% of it is generated from fossil fuels. A sharp decrease in the energy consumption and use of fossil fuels is needed for the EU to fulfil its climate and decarbonisation goals.

60% of the heating stock consists of inefficient boilers (class C or lower).

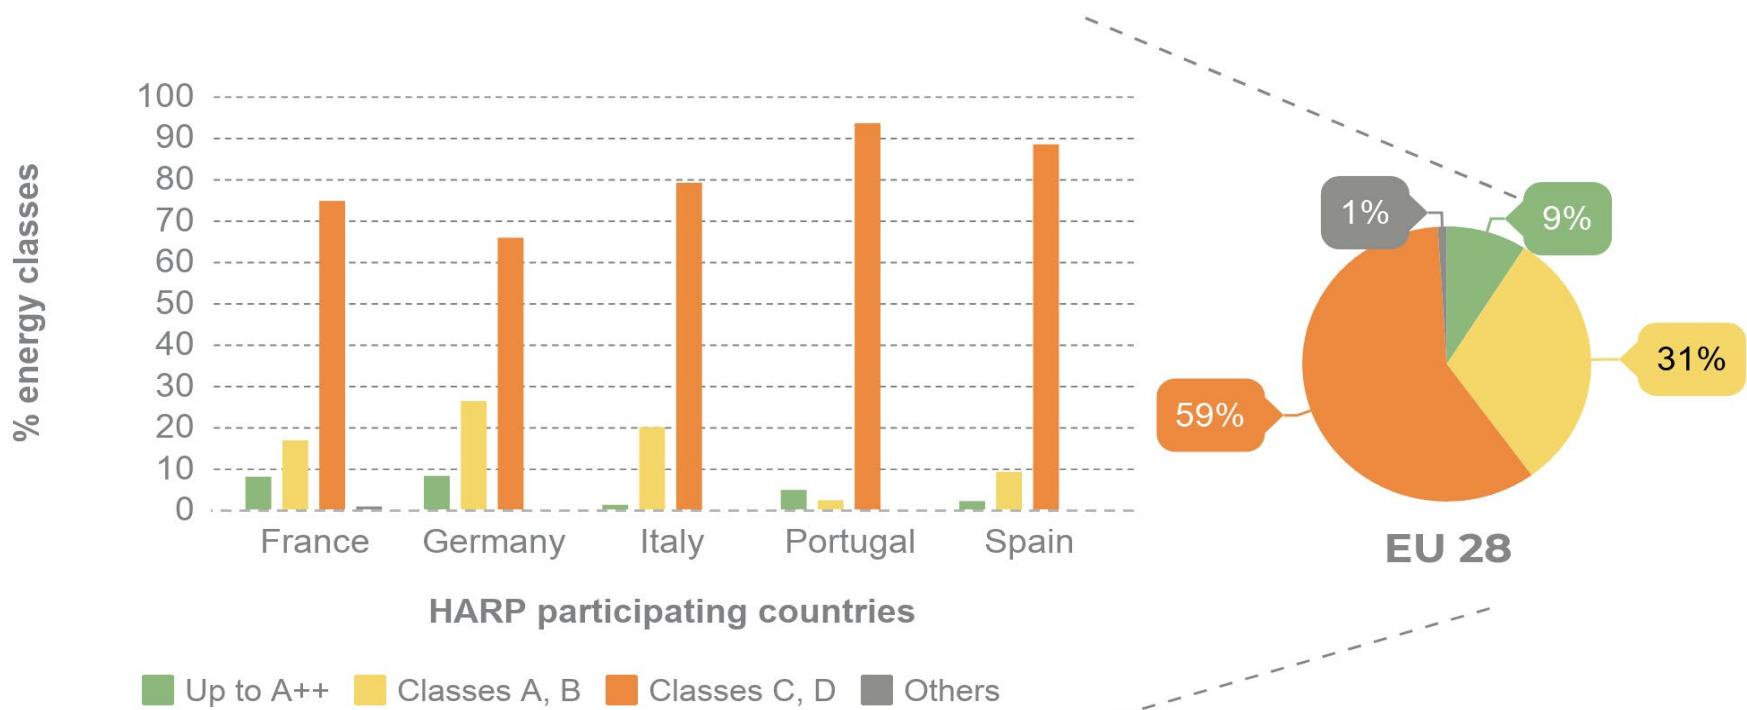

The Ecodesign and Energy Labelling regulations for boilers, in place since 2015, remove the worst performing products from the market, while driving consumers towards the most efficient choices. But installed boilers can last for over 15 years, and their replacement rate is very low (4% per year). As a result, a large number of inefficient boilers is still in use today.

Except in Germany, consumers are not informed about the efficiency of their installed heating systems.

This information is crucial to trigger a replacement of the least-efficient heating appliances. HARP will build on the experience of the mandatory labelling of installed boilers in Germany. Recommendations will be issued for the implementation of the labelling methodologies for installed heating systems at the EU-level, and specifically in countries not participating in HARP.

Heating systems installed stock in the EU and HARP countries

- The market mix is rapidly moving towards more efficient technologies (condensing boilers, heat pumps and hybrid systems) but the renovation rate is still **below 4%**

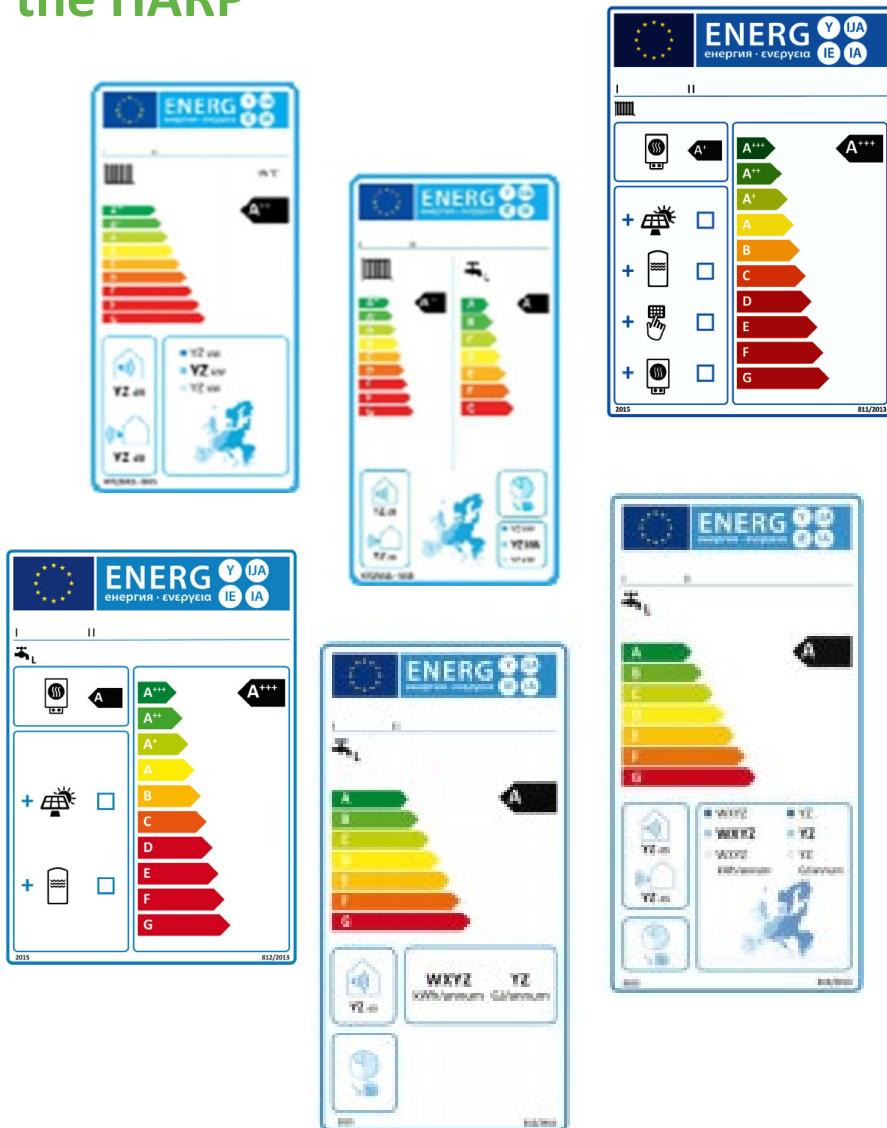

Heating appliances considered within the HARP

Appliances covered by the energy labelling regulations:

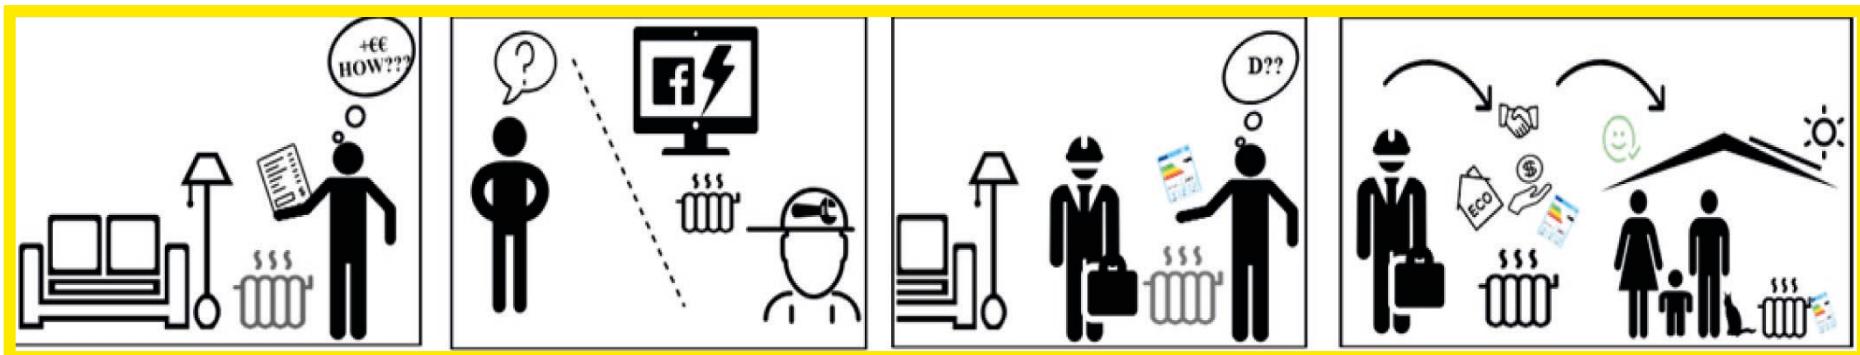

Lot 1 – space heaters, combination heaters, packages of space heater, temperature control and solares device, packages of combination heater, temperature control and solar device

Lot 2 - water heaters, hot water storage tanks and packages of water heater and solar device

Lot 15 - solid fuel boilers and packages of a solid fuel boiler, supplementary heaters, temperature controls and solar devices

What is the main HARP idea?

The main idea is to define the
**energy label for installed heating
boilers**

HARP specific objectives

SO1 | Reach over 1.5 million consumers

SO2 | Influence the heating system renovation process ... of more than 50000 tCO2-eq/y

SO3 | Develop two methodologies to label existing space and water heating solutions

SO4 | Develop an online application that accompanies the customer process to purchase new heating systems

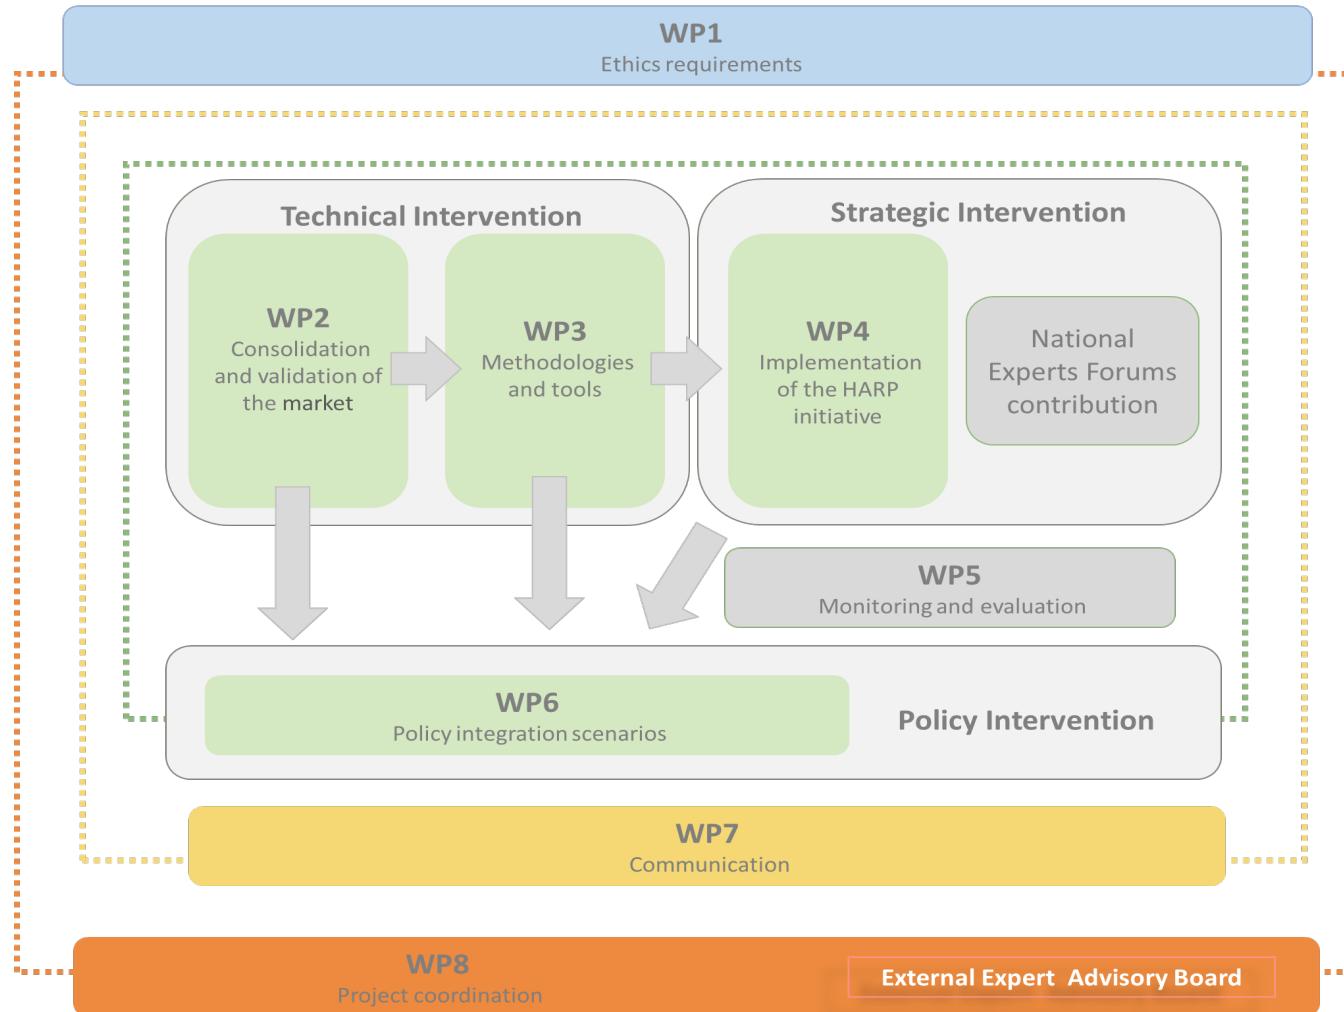

SO5 | Engage with the heating sector supply chain committing 10 heating suppliers and training 1.000 professionals

SO6 | Nurture a network of experts in the heating and consumer sectors, at national and EU level involving 50 organizations.

SO7 | Provide the EC and the 5 participating MS public authorities with policy integration scenarios

SO8 | Influence 10 public authorities responsible for the management of energy efficiency support schemes

HARP structure – WPs overview

WP4 - Engagement initiatives, implementation (Leader: Assotermica)

Deployment of an integrated **engagement campaign** focused on the consumer and fostering his **behaviour change** when confronted with inefficient heating solutions:

- define the **HARP National Action Plans** to deploy in Portugal, Germany, Spain, Italy and France:
 - Build the National Experts Forum (minimum 10 stakeholders)
 - Define activities for the two heating season campaigns
- **develop engagement materials for consumers**, toolbox including: articles, brochure, videos, factsheets, infographics, online serious games, etc.
- **develop commitment materials for professionals**, toolbox including: articles, brochure, trainings, tutorials
- **Implementation of the HARP Action Plan** at national and EU level

NEF ITALY – Which experts there are?

CNA SHV

NOI

MDC

ALTROCONSUMO

CNA

MCE

ASSISTAL

AICARR

CIG

CTI

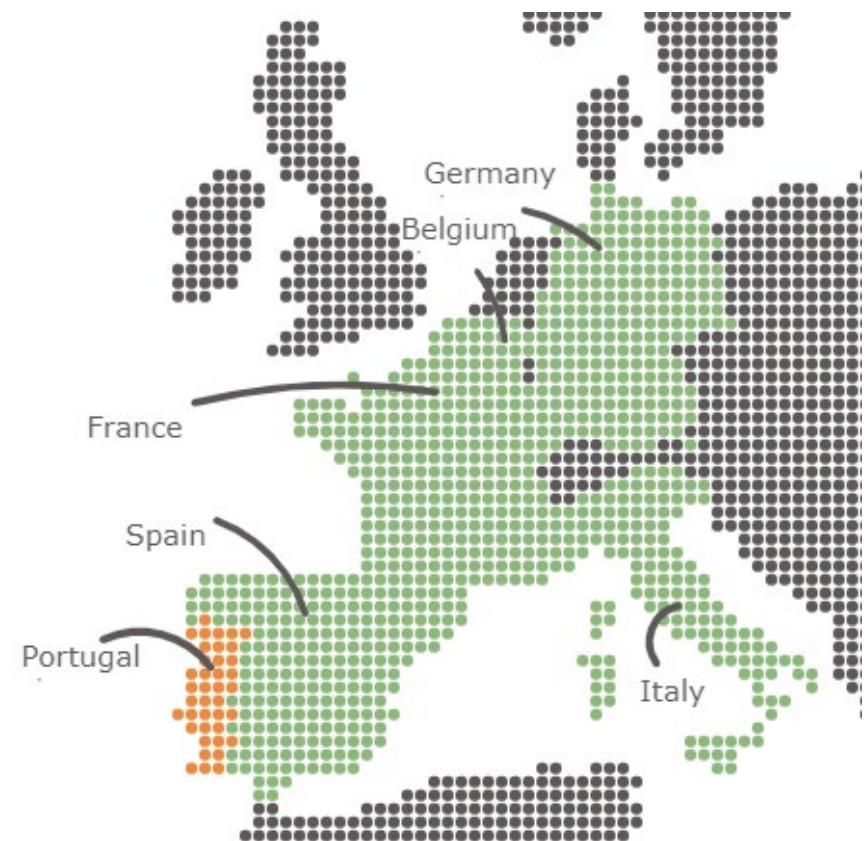

Eliante

Politecnico di Milano

GBC Italia

Agenzia CasaClima

ANGAISA

Timeline

NATIONAL EXPERTS FORUM – NEXT STEPS

- supporting network, involving the most relevant stakeholders, also public authorities and consumer-oriented agencies
 - average of 10 entities
-
- Three meetings are to be scheduled:
 - 1st meeting (up to M15) - HARP strategy at the national level, activities and cooperation definition & **HARP tools presentation and validation**;
 - 2nd meeting (up to M25) - 1st results, feedback, best practices and **update of the national action plan**;
 - 3rd meeting (up to M32) – **policy integration scenarios for the national follow up and business models**.
